Message

While agriculture continues to be an indispensable part of the Indian economy, horticulture has emerged as a dynamic and transformative force within the agricultural landscape. Beyond contributing substantially to the national economy and supporting the livelihoods of millions, it is reshaping rural prosperity by diversifying farm activities, generating higher returns per unit area than traditional crops, and providing year-round income opportunities. With its immense potential in nutrition, export growth, value addition, and employment generation, especially for women and small farmers, horticulture is steadily becoming the backbone of a more resilient, profitable, and future-ready agricultural sector in India.

All these are contributing to the continued sustained efforts and strategic initiatives of the Government to promote the holistic development of the horticulture sector. The Mission for Integrated Development of Horticulture (MIDH) is being implemented across the country with an end-to-end approach that supports every stage of the value chain - from pre-production and production to post-harvest management, processing, and marketing, for ensuring better returns for growers and producers.

As a result of these, horticulture production has risen significantly, from 257.28 million MT in 2011–12 to 355.48 million MT in 2022–23, surpassing the country's food grain production. On the global stage, India stands as second largest producer of fruits and vegetables, and leads the world in the production of several major crops, including Banana, Mango, Lime and Lemon, Papaya, and Okra.

The Ministry of Agriculture & Farmers Welfare has always recognized the growing need for timely, accurate, and comprehensive information across the agricultural spectrum, and so remains dedicated to producing publications that bring together data required for informed policy and strategic decision-making. *Horticultural Statistics at a Glance – 2023* stands as one of the Ministry's flagship releases. The publication offers an in-depth and holistic view of India's horticulture sector, presenting rich time-series data on key indicators including area, production, value of output, storage and processing infrastructure, market arrivals, prices, trade performance, and technical insights on major horticultural crops. Together, these datasets provide a meaningful foundation for researchers, policymakers, and stakeholders to better understand trends, assess progress, and shape future interventions in the sector.

I commend Shri Arun Kumar, Senior Economic and Statistical Adviser, and Smt. Swapnalee Bhattacharya, Adviser, along with their dedicated team, for their efforts in bringing out the *Horticultural Statistics at a Glance – 2023* within two months after the finalisation of the previous issue. I am confident that this work will serve as a valuable resource for policymakers, farmers, academicians, researchers, and all other stakeholders engaged in the growth and development of the horticulture sector.

FOREWORD

The horticulture sector in India which covers a diverse range of crops including fruits, vegetables, spices, plantation crops, flowers, and aromatic and medicinal plants-plays a pivotal role in the nation's economy, food security, nutrition, and employment generation. Contributing nearly 38 percent of the total value of agricultural output, the sector has emerged as a key driver of agricultural growth.

As the sector evolves, data-driven practices are becoming indispensable for enhancing sustainability, improving productivity, and strengthening competitiveness. Access to reliable and timely data enables growers to make informed decisions on planting, irrigation, and fertilization, leading to more efficient resource use, improved yields, and better crop quality. Data also supports innovation and efficiency across the value chain, fostering an enabling environment for trade and market expansion.

The publication *Horticultural Statistics at a Glance – 2023*, now in its seventh edition, provides updated and comprehensive information on all major indicators of the horticulture sector. Widely used as a reference document, it presents detailed state-wise statistics on area, production, and productivity of horticultural crops, along with data on value of output, market arrivals, prices, and trade.

I express my sincere gratitude to the Secretary, DA&FW, for his continued support and encouragement due to which all work regarding the *Horticultural Statistics at a Glance – 2023* could be completed within two months after the finalisation of the previous issue. I also commend Smt. Swapnalee Bhattacharya, Adviser, and her dedicated team for their commitment, hard work, and enthusiasm in bringing out this publication. I am confident that, like its previous editions, this volume will continue to serve as a valuable resource for all stakeholders and will be appreciated for its comprehensive coverage of the horticulture sector.

PREFACE

Data plays a critical role in modern agriculture by enabling researchers, policymakers, and even farmers to make informed decisions that improve productivity, sustainability, and profitability. With the growing demand for food and the challenges posed by climate change, reliable agricultural data supports precision farming, efficient supply chains, and long-term planning. And within agricultural production, horticulture data is especially important because horticultural crops such as vegetables (especially the TOP crops), fruits, flowers, and medicinal plants—are highly sensitive to environmental conditions and management practices. Detailed data on crop varieties, growth cycles, irrigation needs, nutrient requirements, and post-harvest handling is essential to maintain quality and reduce losses. These data may support market forecasting, help meeting food safety standards, and enable producers to respond quickly to shifting consumer preferences. As such timely release of these data is vital for maximizing profitability to the farmers and for ensuring consistent, high-quality output.

The 'Horticultural Statistics at a Glance' has been the result of an effort of the Ministry to bring out all such relatable factors into one publication, thereby saving a lot of time in consulting various publication to arrive at a decision. The Seventh issue of the publication, the 'Horticultural Statistics at a Glance-2023' contains rich collection of various information pertaining to horticulture production of the country, apart from the usual information on area, production, productivity, value of output, export, import, market arrival, prices etc. It also gives physical and financial achievement under the Mission for Integrated Development of Horticulture (MIDH), commodity profiles of important horticulture crops, infrastructure availability, rain fall distribution, irrigated area etc. For this publication, data on area and production of Horticulture crops has been taken from State/UTs through the HAPIS portal and other Central agencies.

I take this opportunity to express my gratitude to Shri Arun Kumar, Senior Economic and Statistical Adviser, for his valuable support and guidance, and compliment Smt. Suchitra Yadav, Director, Shri Hemanga Bhargav, Assistant Director, Smt. Somya Srivastava, Junior Statistical Officer, Shri Mohammad Mustkeem, Consultant, and Shri Ranbir Singh, Data Entry Operator, for their unrelenting efforts in bringing out this publication in a remarkably short duration.

6.1	Main Agro-Climatic Regions / zones of India	
6.2	Agricultural Land by use in India	
6.3	Area under Broad soil groups in India	
6.4	Average size of holdings by different size classes	
6.5	State-wise distribution of number of operational holdings and area operated-all social groups	
6.6	All India Rainfall Distribution	
6.7	Source -wise Irrigated Area	

6.8	State/UT-wise Net Area Irrigated by Source the year 2022-23	
6.9	All India Cultivated and Irrigated Area-Gross and Net Along with Cropping Intensity	
6.10	Cropping Pattern according to Land Utilization	
6.11	Forest Cover in States/UT's in India-2023	
7	**Area, Production and Yield of Horticulture Crops**	
7.1	**Time Series of All India Area, Production and Yield for Major Horticultural Crops**	
7.1.1	All India Area, Production and Productivity of Lime/Lemon, Orange and Mosambi	
7.1.2	All India Area, Production and Productivity of Apple, Banana and Grapes	
7.1.3	All India Area, Production and Productivity of Guava, Litchi and Mango	
7.1.4	All India Area, Production and Productivity of Muskmelon, Papaya and Pineapple	
7.1.5	All India Area, Production and Productivity of Pomegranate, Sapota and Watermelon	
7.1.6	All India Area, Production and Productivity of Brinjal, Beans and Bittergourd	
7.1.7	All India Area, Production and Productivity of Bottlegourd, Cabbage and Cauliflower	
7.1.8	All India Area, Production and Productivity of Carrot, Elephant Footyam and Green Chillies	
7.1.9	All India Area, Production and Productivity of Okra, Onion and Peas	
7.1.10	All India Area, Production and Productivity of Potato, Pumpkin and Radish	
7.1.11	All India Area, Production and Productivity of Sweet Potato, Tomato, and Tapioca	
7.1.12	All India Area, Production and Productivity of Arecanut, Cashewnut and Coconut	
7.1.13	All India Area, Production and Productivity of Red Chillies (Dried), Corinder and Ginger	
7.1.14	All India Area, Production and Productivity of Black Pepper, Garlic and Turmeric	
7.2	**State-wise Summary**	
7.2.1	State-wise Area and Production of Horticulture Crops from 2014-15 to 2022-23	
7.2.2	Statewise Area and Production of Fruit Crops from 2014-15 to 2022-23	
7.2.3	State wise Area and Production of Vegetable Crops from the year 2014-15 to 2022-23	
7.2.4	State wise Area and Production of Plantation Crops from the year 2014-15 to 2022-23	
7.2.5	State wise Area and Production of Aromatics and Medicinal Plants from the year 2014-15 to 2022-23	
7.2.6	State wise Area and Production of Flowers from the year 2014-15 to 2022-23	
7.2.7	State-wise Area and Production of Spices Crops from the year 2014-15 to 2022-23	
7.2.8	State-wise Area and Production of Honey from the year 2014-15 to 2022-23	
7.3	**State -wise Area, Production and Productivity for Individual Horticulture Crops**	
7.3.1	State-wise Area, Production and Productivity of Almond	
7.3.2	State-wise Area, Production and Productivity of Aonla	
7.3.3	State-wise Area, Production and Productivity of Apple	
7.3.4	State-wise Area, Production and Productivity of Banana	
7.3.5	State-wise Area, Production and Productivity of Grapes	
7.3.6	State-wise Area, Production and Productivity of Guava	
7.3.7	State-wise Area, Production and Productivity of Mango	
7.3.8	State-wise Area, Production and Productivity of Muskmelon	
7.3.9	State-wise Area, Production and Productivity of Papaya	
7.3.10	State-wise Area, Production and Productivity of Pineapple	
7.3.11	State-wise Area, Production and Productivity of Pomegranate	
7.3.12	State-wise Area, Production and Productivity of Sapota	
7.3.13	State-wise Area, Production and Productivity of Strawberry	
7.3.14	State-wise Area, Production and Productivity of Walnut	
7.3.15	State-wise Area, Production and Productivity of Watermelon	
7.3.16	State-wise Area, Production and Productivity of Lime/Lemon	
7.3.17	State-wise Area, Production and Productivity of Mandarin Orange	
7.3.18	State-wise Area, Production and Productivity of Sweet Orange	
7.3.19	State-wise Area, Production and Productivity of Beans	
7.3.20	State-wise Area, Production and Productivity of Bottle Gourd	

7.3.21	State-wise Area, Production and Productivity of Brinjal	
7.3.22	State-wise Area, Production and Productivity of Cabbage	
7.3.23	State-wise Area, Production and Productivity of Capsicum	
7.3.24	State-wise Area, Production and Productivity of Carrot

Overview of Horticulture Sector

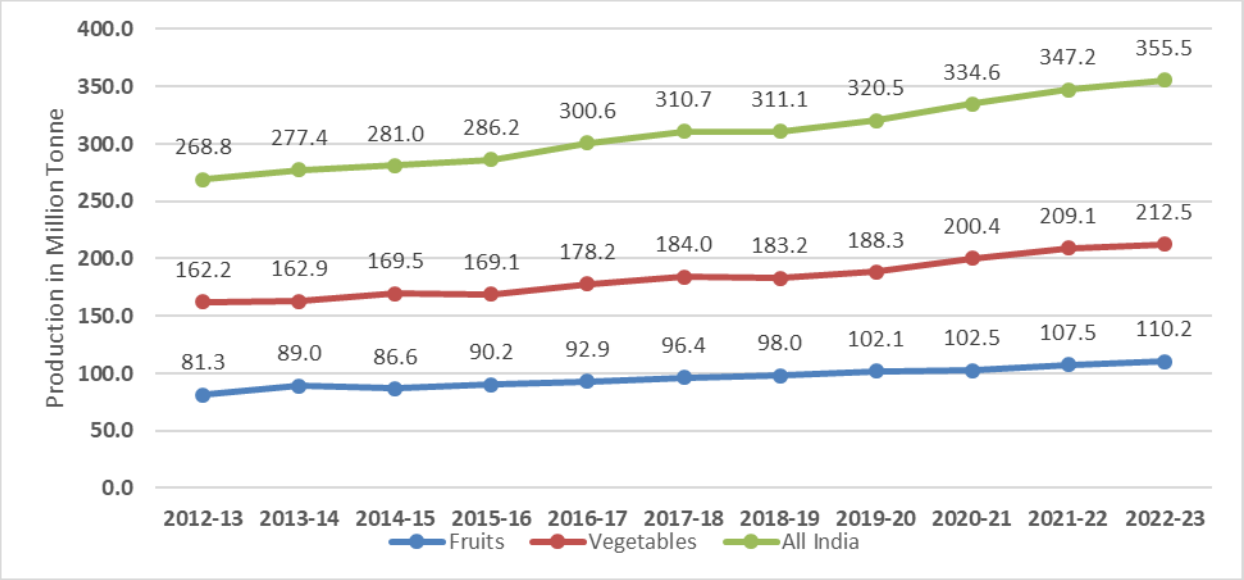

The need for diversification to horticulture sector was acknowledged by the Government of India in mid-eighties by focusing its attention on investment in this sector. Presently horticulture has established its credibility in improving income through increased productivity, generating employment and in enhancing exports. Resultantly, horticulture in the country has moved from rural confines to commercial ventures.

The Department of Agriculture & Farmers Welfare (DA&FW) of the Ministry of Agriculture & Farmers Welfare is the nodal department for over viewing horticulture development in the country. It implements different programmes through Departments of Horticulture/Agriculture in all the States and provides the leadership to coordinate activities for the promotion of horticulture. However, efficient implementation of programme and policies call for robust information in time. In this backdrop, this book presents the overall information on horticulture, focusing on area, production and yield estimates along with information about price, market arrivals and export.

The scenario of horticulture crops in India has become very encouraging. The percentage share of horticulture output in Agriculture has become 38%. Share of Plan outlay of Horticulture under agriculture & allied cultivation was Rs. 3844 ’00 crore in the year 2011-12, has increased to Rs. 5854 ’00 crore in 2022-23 (Table-4.1).

PRODUCTION: India has witnessed increase in horticulture production over the last few years. Significant progress has been made in area expansion of different horticulture crops resulting in higher production. Over the last decade, the area under horticulture grew by 1.86% per annum and annual production increased by 2.84%. During 2022-23, the production of horticulture crops was 355.48 Million Tonne from an area of 28.44 Million Hectare **(Table 1.1).** The production of vegetables has increased from 162.19 Million Tonne to 212.55 Million Tonne since 2012-13 to 2022-23 and production of fruits has increased from 81.29 Million Tonne to 110.21 Million Tonne since 2012-23 to 2022-23 as depicted in Table-1.1.

Figure-1.1: Annual Production of Fruits, Vegetables and Total Horticulture crops over the last 10 years from 2012-13 to 2022-23

The percentage distribution of total horticulture crops in the country remains highest for vegetables (58 – 61%) followed by fruits (29 - 32%) and Plantation crops (4 – 6 %) over the last ten years as shown in Table-1.4.

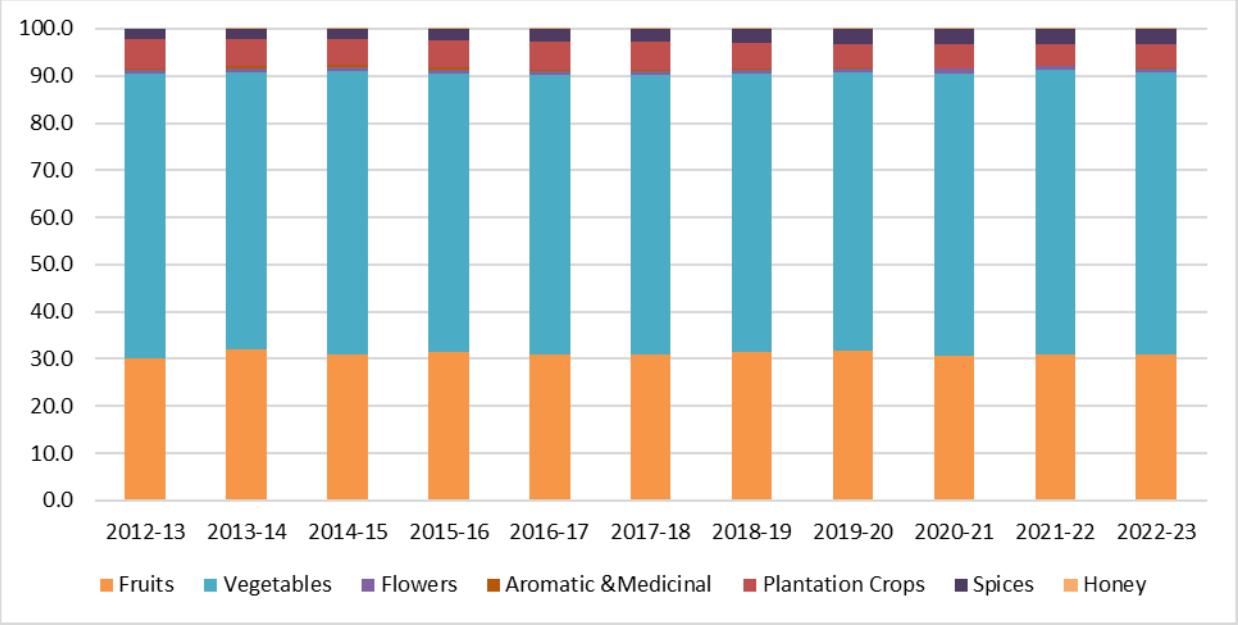

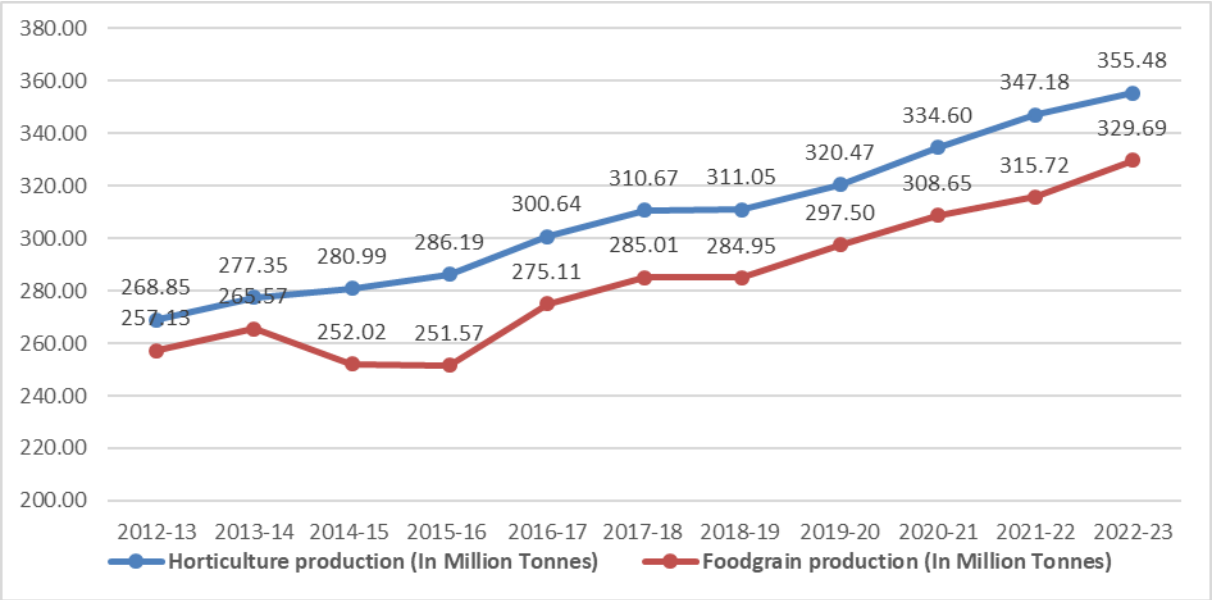

Figure-1.2: Percentage distribution of total horticulture production by major crop categories from the year 2012-13 to 2022-23

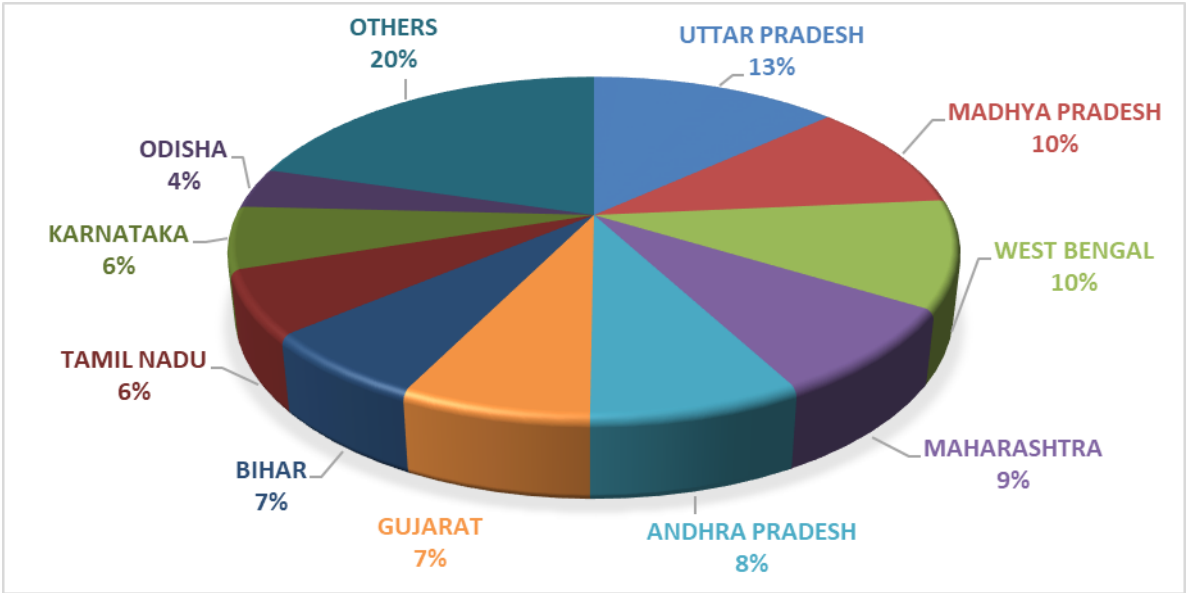

The production of Horticulture crops have outpaced the production of food grain since 2012-13 as may be seen at Figure–1.3. Compound Annual Growth Rate (CAGR) in Horticulture production in India during 2012-13 to 2022-23 is 2.57%. Area under Horticulture crops is increasing in India since 1990-91. Compound Annual Growth Rate (CAGR) in Horticulture area during 2012-13 & 2022-23 is 1.67%.

Figure - 1.3: Horticulture Production vis-à-vis Foodgrains Production from 2012-13 to 2022-23

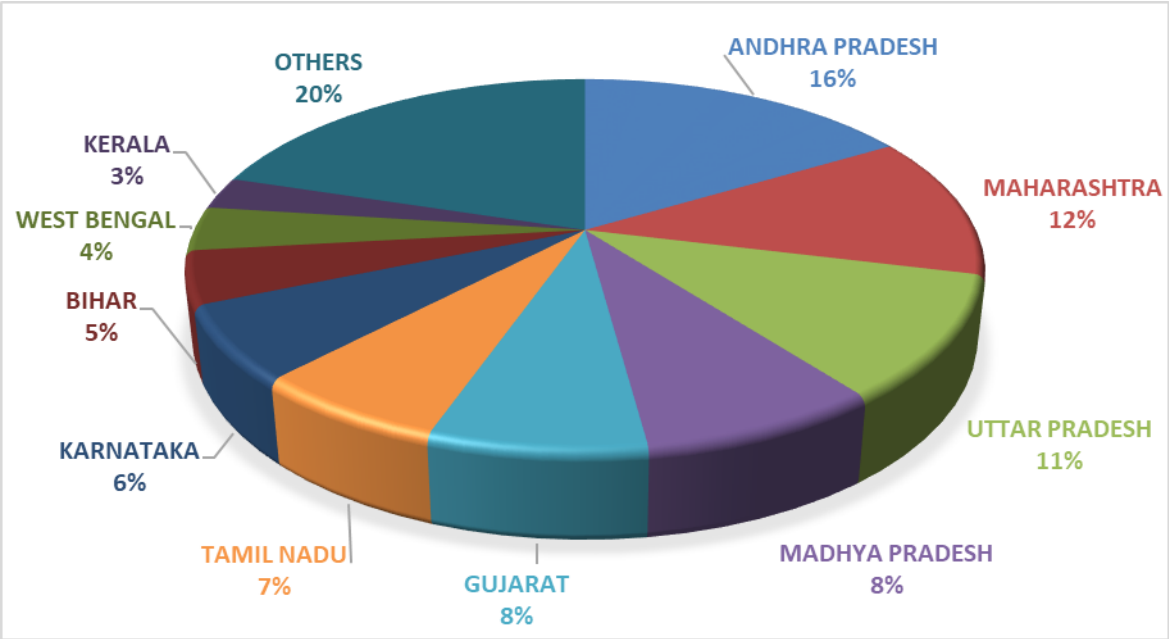

In 2022-23, the total horticulture production was highest in the State of Uttar Pradesh (470.90 Lakh Tonne) followed by Madhya Pradesh (365.54 Lakh Tonne) and West Bengal (363.15 Lakh Tonne) (Table-7.2.1)

Figure 1.4: Percentage share of total horticulture production among major producing States for the year 2022-23

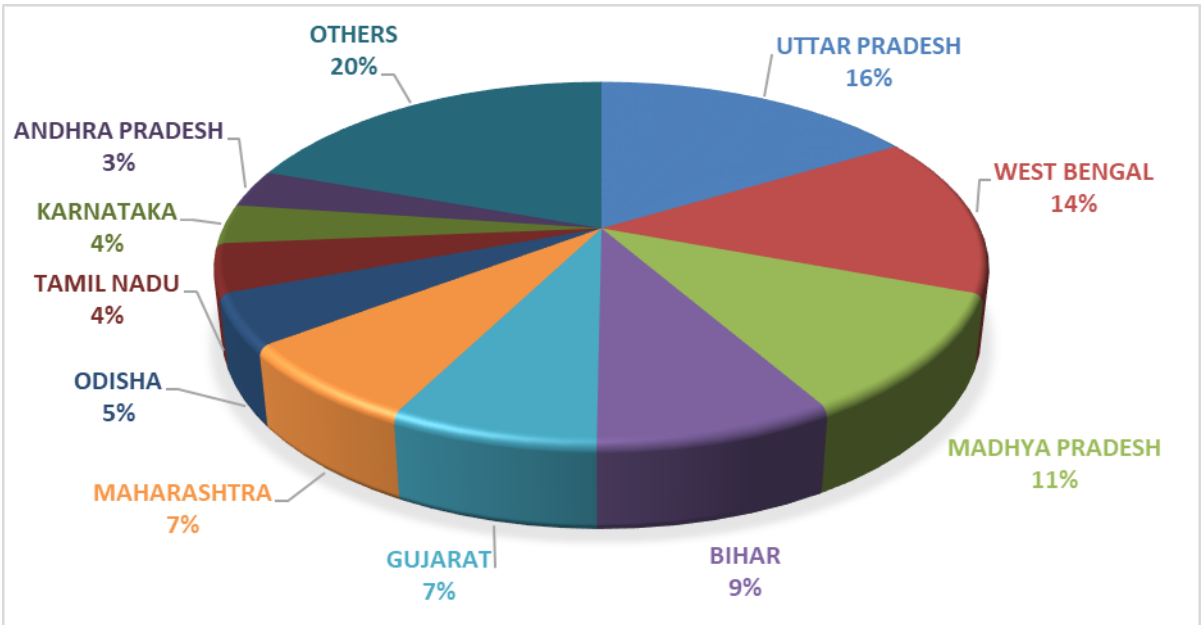

The total production of fruits in the year 2022-23 was highest in case of Andhra Pradesh (181.12 Lakh Tonne) followed by Maharashtra (136.62 Lakh Tonne) and Uttar Pradesh (118.39 Lakh Tonne) (Table-7.2.2).

Figure-1.5: Percentage Share of fruit production in major fruits producing States for the year 2022-23

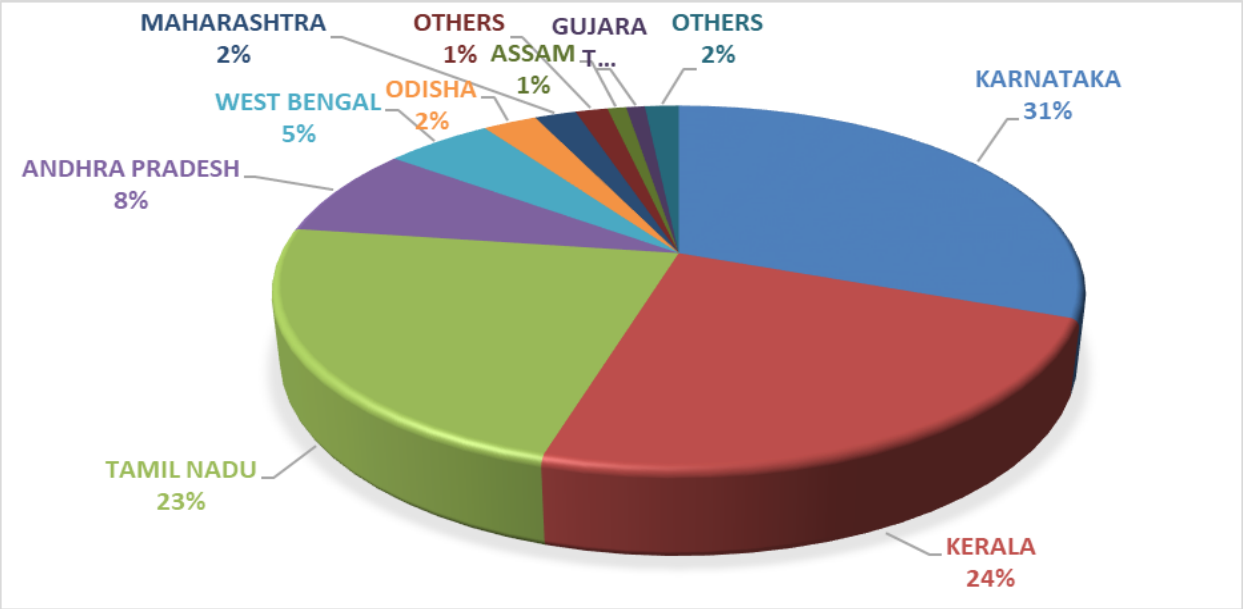

Apart from the nutritional benefits, the production of vegetables improves the economy of a country as these are very good source of income and employment. During 2022-23, the area under vegetable crop was 113.09 Lakh Hectare with a production of 2125.48 Lakh Tonne in India (Table 1.1). For this period the total vegetable production was highest in case of Uttar Pradesh (347.67 Lakh Tonne) followed by West Bengal (305.74 Lakh Tonne) (Table-7.2.3).

Figure-1.6: Percentage share of vegetables production in major vegetables producing States for the year 2022-23

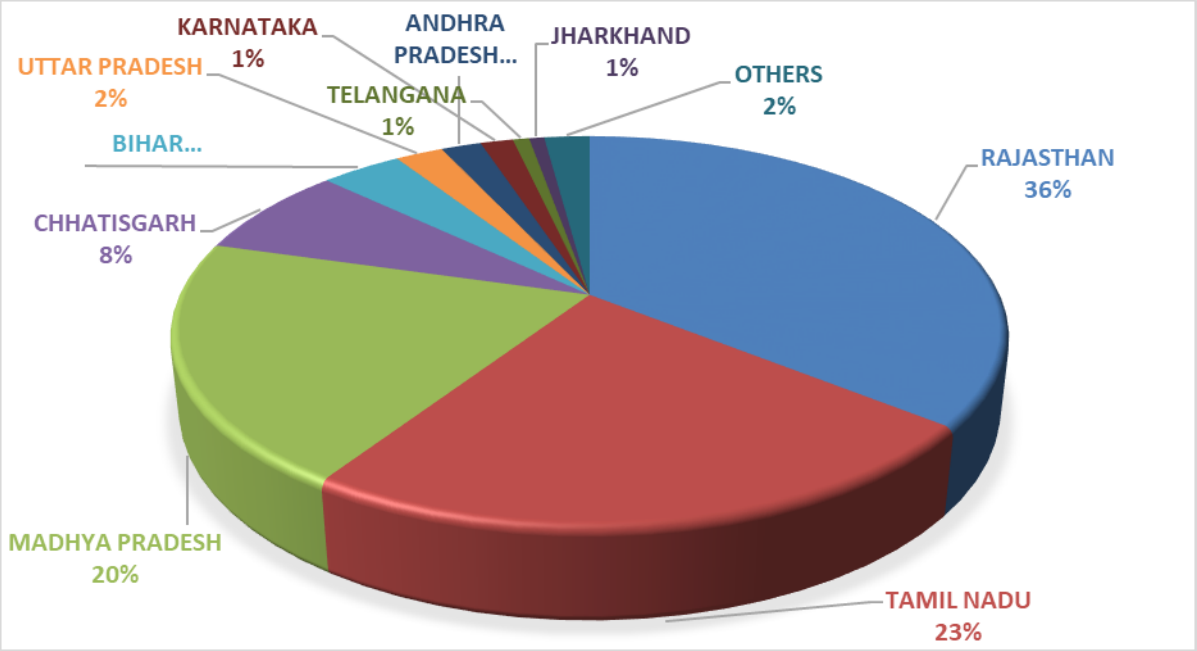

During 2022-23, the area under Plantation crop was 45.51 Lakh Hectare with a production of 170.49 Lakh Tonne in India (Table 1.1). For this period the total production was highest in case of Karnataka (52.34 Lakh Tonne) followed by Kerala (40.72 Lakh Tonne) (Table-7.2.4).

Figure-1.7: Percentage share of Plantation production in major plantation producing States for the year 2022-23

During 2022-23, the area under Aromatic and Medicinal crops was 7.54 Lakh Hectare with a production of 6.08 Lakh Tonne in India (Table 1.1). For this period the total production was highest in case of Rajasthan (2.17 LakhTonne) followed by Tamil Nadu (1.43 Lakh Tonne) (Table-7.2.5).

Figure-1.8: Percentage share of Aromatic and Medicinal production in major Aromatic and Medicinal producing States for the year 2022-23

Floriculture has good potential in the country, catering to both the domestic and international demand. Floriculture is also important for bee-keeping industry, which too provides an alternate source of income to the Indian farmers. During 2022-23, the highest production of Flowers was recorded in Tamil Nadu (6.37 Lakh Tonne) followed by Karnataka (5.07 Lakh Tonne) and Madhya Pradesh (4.52 Lakh Tonne) (Table-7.2.6).

INFRASTRUCTURE AVAILABILITY: In India, because of imperfect coordination between supplies and demand, seasonality and perishable nature of horticulture crops, storage plays an important role in the marketing. A chain of cold storages are set up in different States of our country, the State of Uttar Pradesh (2456) was having highest number of cold storages as on 31.03.2023 followed by Gujarat (995) and Punjab (750) (**Table-11.5).**

CONSUMPTION: During 2022-23, the average daily per capita per consumer unit intake of calories, proteins and fats is higher among urban population than that of rural population. Along with urbanisation, people are likely to increase their calorie intake at a higher pace. It is estimated that per capita net fruits availability in our country is 152.26 gm per day and vegetables availability in our country is 293.65 gm per day. The annual consumption of Onion is 19.77 Million Tonne, Potato is 29.62 Million Tonne and Tomato is 13.68 Million Tonne, whereas the demand for Onion is 31.20 Million Tonne, Potato is 47.39 Million Tonne and Tomato is 20.66 Million Tonne **(Table 12.1 -12.3).**

WORLD SCENARIO: It is a matter of satisfaction that India is the second largest producer of Vegetables and Fruits and the country has a significant presence in global market **(Table-13.1)**. The different types of fruits are exported to the outside World. Grapes occupy the premier position in exports with 269 thousand Tonne valued at Rs. 254793 lakh **(Table-10.1.4)**. Other fruits which have attained significant position in exports are Banana and Mango.

The development achieved in the horticulture sector is indicative of the fact that there is growing demand for horticulture produce. The experiences have been rewarding for enhanced output from the investment. Availability of timely robust information in this sector will certainly improve the socio-economic conditions of Indian farmers by providing self-reliance besides environmental protection.

Notes:

1: Prior to 1993-94 data of flowers was not collected

2: The production figures of flowers till 2011-12 included only loose flowers as the production of cut flowers were collected in numbers. From 2012-13 onwards, the figures for cut flowers (converted into Metric Tonne from numbers) were also included in the production figures of flowers.

3: Till 2003-04,Separate estimates for aromatic and medicinal plants were not released.

4: Production figures of Honey was not available for the year 1991-92, 1992-93, 1994-95, 2011-12 and 2012-13.

5: Prior to 2015-16, watermelon and muskmelon were included under vegetables. From 2015-16 onwards these are classified as fruits.

Methodology for Estimation of Horticulture Crops

Fruits and vegetables account for nearly 90% of total horticulture production in the country. India is now the second largest producer of fruits and vegetables in the world and is the leader in several horticultural crops, namely Mango, Banana, Papaya, Cashewnut, Arecanut, and Okra. However the nature of horticulture crops being such that it is not easy to make assessment of their production. These crops, especially vegetables are grown in small plots, fields or in the back of the houses, do not have single harvesting in most of the cases which makes their assessment difficult. Many horticulture crops have multiple pickings in a single season. Similarly many fruit trees are scattered, which are not counted for assessment.

In view of above difficulties several research studies were taken up by agricultural scientists in the past. Then central sector Plan Scheme called Crop Estimation Survey of Fruits & Vegetables (CES-F&V)-a component of Improvement of Agricultural Statistics Scheme, was implemented by the DES. The scheme envisaged the generation of area and production estimates using sampling and estimation methodology evolved by ICAR - Indian Agricultural Statistics Research Institute (IASRI), Pusa, New Delhi. The scheme was implemented in 11 States (Andhra Pradesh, Gujarat, Haryana, Himachal Pradesh, Karnataka, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu and U.P) covering selected crops- 7 fruit crops (Apple, Mango, Citrus, Pineapple, Grapes, Banana and Guava) and 7 vegetable crops (Potato, Cabbage, Cauliflower, Onion, Tomato, Ginger and Turmeric). The scheme was initiated in 1982-83 and was implemented by central funding through DAC & FW. However the scheme was fraught with some problems which was noted by National Statistical Commission (NSC) which recommended that

- The methodology adopted in the pilot scheme of "*Crop Estimation Survey on Fruits and Vegetables"* should be reviewed and an alternative methodology for estimating the production of horticultural crops should be developed taking into account information flowing from all sources including market arrivals, exports and growers associations.
- Special studies required to establish the feasibility of such a methodology should be taken up by a team comprising representatives from ICAR - Indian Agricultural Statistics Research Institute (IASRI), Directorate of Economics and Statistics, Ministry of Agriculture (DESMoA), Field Operations Division of National Sample Survey Organization (NSSO (FOD)) and from one or two major States growing horticultural crops.
- The alternative methodology should be tried out on a pilot basis before actually implementing it on a large scale.

Accordingly the earlier scheme viz. CES F&V has been discontinued from the year 2013-14. A new alternative methodology **Coordinated Programme on Horticulture Assessment and Management using geoinformatics (CHAMAN)** developed by IASRI was tried out on pilot basis in 6 states under the project CHAMAN of Department of Agriculture, Cooperation & Farmers' Welfare. Results through by the pilot studies could not meet the objective. IASRI has been asked to look into the matter and revise the methodology accordingly.

Coordinated Programme on Horticulture Assessment and Management using geo-informatics (CHAMAN)

The Department of Agriculture, Cooperation & farmers' Welfare, Ministry of Agriculture & Farmers welfare under the Mission for Integrated Development of Horticulture (MIDH) had launched a project called CHAMAN. The programme has the objective to develop and firm up scientific methodology for estimation of area and production under horticulture crops. It has two main components namely:

(1) Remote sensing (RS) Technology and (2) Sample Survey (SS) methodology for estimation of area and production of horticultural crops.

The Remote Sensing programme is being implemented by Mahalanobis National Crop Forecast Centre (MNCFC) and has the following components.

i. **Area and Production assessment of seven major horticultural crops in major states**.
ii. Remote sensing for **developmental studies** like Site suitability and post-harvest infrastructure development
iii. **Detailed scientific field level research studies** for developing technology for crop identification, yield modeling and disease assessment for other horticulture crops.

Area Assessment

Area assessment has been carried out for selected crops in the selected districts of major states. The crops were selected based on the production share, as mentioned in the section 1. Accordingly, following crops and study area were proposed. Satellite data used were either of LISS III (23.5 m resolution) or LISS IV, depending upon the spatial extent of the crop. In absence of availability of Indian satellite data during the crop growth, foreign satellite data was also explored.

Crop Type	Crop	State (Districts)
Fruit	Banana	Tamil Nadu, Andhra Pradesh , Maharashtra , Gujarat, Karnataka
	Mango	UP, Gujarat, Karnataka, Andhra, Bihar
	Citrus	Andhra Pradesh, Maharashtra, Punjab, MP, Gujarat
Vegetables	Potato	UP, Bihar, WB, Gujarat, Punjab
	Onion	Maharashtra, Gujarat, MP, Karnataka, Bihar
	Tomato	Andhra Pradesh , Odisha, Karnataka, MP, WB, Bihar
Spices	Chilli	Andhra Pradesh, Karnataka, WB, MP, Odisha

Production Assessment

For production forecasting, yield modeling has been carried out. India Meteorological Department, under FASAL project, develops district-level, empirical agro-meteorological yield models for different crops. Similar procedures were followed for yield forecasting of vegetable crops.

Horticultural Development Studies

The Horticultural development studies were grouped into following categories.

i) Site Suitability
ii) Post-Harvest Infrastructure
iii) Crop Intensification
iv) GIS database creation
v) Orchard Rejuvenation
vi) Aqua-horticulture

These studies were used for:

i) Site-suitability: for introduction/expansion of important horticulture crops, e.g. scope of replicating the village level horticulture plans developed for North-Eastern states in various states.

ii) Post-harvest Infrastructure: GIS and remote sensing were used to assess the need and find the optimum locations for infrastructures such as cold chains, markets, etc.

iii) Crop Intensification: In areas where cropping intensity was low and regions of unutilized/under-utilized, short duration horticultural crops could be incorporated into the crop rotation. This also linked with watershed and wasteland development programmes of the Government of India.

iv) GIS database creation: The GIS database included the inputs required managing the horticultural crops such as soils, weather, infrastructure (e.g. markets). This helped in better income generation for the farmers, especially in tribal and remote areas.

v) Orchard Rejuvenation: This aids in identifying the plantations/ orchards that needed rejuvenation and assess the shifting of orchard areas especially of Apples in Himachal Pradesh, Mango (Malda), Orange- (Darjeeling) and Citrus in Arunachal Pradesh.

vi) Aqua-horticulture: Wetland in Andhra Pradesh has been created at 1:50000 scale using satellite data. Various horticultural crops (e.g. Makhana/Fox nut) are grown in wetlands. A GIS database was created for selected sites to understand the ecology and economics of these crops so that these could be replicated.

Pollinizing	Tydeman's Early, Red Gold, Golden Delicious, Mc Intosh, Lord Lambourne, Winter Banana, Granny Smith, Starkspur Golden, Golden Spur

- **Advance Technology** : High density planting on Mailing root stock
- **Pre-cooling** : Forced air
- **Storage conditions-**

Temperature : -1.1˚ to 0˚C
Relative Humidity : 85-90%
Storage Period : 4-8 Months

- **Peak Harvesting Season:**

1) Jammu & Kashmir : September, October
2) Himachal Pradesh : August, September
3) Uttrakhand : July, August
4) Arunachal Pradesh : October

- **Export from India (2022-23):**

Quantity : 52.88 Thousand Tonne
Value : 16766.87 Lakh Rupees

- **Import to India (2022-23):**

Quantity : 373.51 Thousand Tonne
Value : 234868.23 Lakh Rupees

14.4.2 BANANA

- **Origin** : South East Asia

- **Major Producing States/Districts in India** :

1) Tamil Nadu (Theni, Tiruchirappalli, Coimbatore, Tuticorin, Pudukkottai etc.)

Uttar Pradesh	G-9 (Tissue Culture), Dwarf Cavendish, Alpon, Chinia, Chini
Maharashtra	Dwarf Cavendish, Basrai, Robusta, Lal Velchi, Safed Velchi, Rajeli Nendran, Grand Naine, Shreemanti, Red Banana

- **Advance Technology** : Planting of tissue cultured plants.
- **Pre-cooling** : Forced air
- **Storage conditions:**

Holding Room : 13˚ to 14˚C
Ripening Room : 15˚ to 18˚C
Relative Humidity : 90-95%
Storage Period : Mature green bananas can be stored upto 3 weeks in ethylone free air or up to 6 weeks in a controlled atmosphere at 14˚ C

- **Peak Harvesting Season:**

1) Gujarat : September to November
2) Andhra Pradesh: Round the year
3) Tamil Nadu : Round the year
4) Uttar Pradesh : July, August
5) Maharashtra : Round the year

- **Export from India (2022-23):**

Quantity : 361.90 Thousand Tonne
Value : 141315.62 Lakh Rupees

- **Import to India (2022-23):**

Quantity : 0.0 Thousand Tonne
Value : 0.0 Lakh Rupees

14.4.3 MANGO

- **Origin** : Asia

- **Major Producing States/Districts in India** :

1) Uttar Pradesh (Lucknow, Saharanpur, Unnao, Bulandshahr, Amroha etc.)
