Message

While Agriculture remains critically important to the Indian economy, horticulture plays a crucial role in the country's agricultural landscape, contributing significantly to the national economy and providing livelihood opportunities to millions - by diversifying Indian agriculture, offering higher returns per unit area compared to traditional farming, supplementing farmers' incomes and enhancing farm profitability.

Several initiatives have been taken by the Government for the holistic development of the Horticulture Sector. The Mission for Integrated Development of Horticulture (MIDH) has been implemented in the country by adopting an end-to-end holistic approach to assure appropriate returns to growers/producers by covering pre-production, production, post-harvest management, processing and marketing. The production of horticulture crops has increased from 240.43 Million MT in 2010-11 to 347.18 Million MT in 2021-22 and has overtaken the production of food grains in the country. Globally, India is the second largest producer of vegetables and fruits. Country ranks first in the production of a number of crops like Banana, Mango, Lime and Lemon, Papaya and Okra.

Recognizing the importance of timely and reliable information on different aspects of agriculture, the Ministry of Agriculture & Farmers Welfare thrives to bring out publications, wherein all aspects of data crucial for decisions making are compiled. The 'Horticultural Statistics at a Glance-2022' is one such important publication of the Ministry. The publication provides a comprehensive picture of the horticulture sector of the country by providing time-series data on important parameters such as area, production, value of output, storage & processing infrastructure developed, market arrival, prices, imports, exports, technical information on major horticulture crops, and so on.

I compliment Shri Arun Kumar, Senior Economic and Statistical Adviser, Smt. Swapnalee Bhattacharya, Adviser, along with their team for their efforts in bringing out this publication. I am confident that this publication will be appreciated by the policy makers, farmers, academicians, researchers and other stakeholders.

FOREWORD

The horticulture sector in India encompassing a wide range of crops including, fruits, vegetables, spices, plantation crops, flowers, aromatic and medicinal plants plays a crucial role in the country's economy, food security, nutrition, and employment. Horticulture crops account for nearly thirty-eight percent in value of total agriculture output of the country. Data-driven practices contribute to sustainability of horticulture crops, manage resources effectively, while creating a competitive advantage for trade through innovation and efficiency. As such, data is crucial in horticulture for enabling growers on planting, irrigation, and fertilization to optimize resource use, improve yield, and enhance crop quality.

The publication 'Horticultural Statistics at a Glance-2022' incorporates updated information on all-important indicators of the horticulture sector. The present edition of the publication is Sixth in the series. The publication is widely used as a reference book for data on various horticulture crops produced in the country. The book presents statistics on State-wise area, production and productivity of horticulture crops. It also provides information on value of output, market arrivals, prices and trade of various horticulture crops.

I express my deep gratitude to the Secretary, DA&FW, for his unwavering support and guidance. I congratulate Smt. Swapnalee Bhattacharya, Adviser and her team for their enthusiasm, hard work and dedication that have helped in bringing out this publication. I compliment Shri Joseph C.F, former Adviser, for his efforts in giving the initial shape to this data journal. I am hopeful that like the previous edition, the current publication will also be appreciated by all stakeholders for its comprehensive coverage of various aspects of the horticulture sector.

PREFACE

The horticulture sector has gained prominence for its crucial role in India's economy by dint of its role in food security, nutrition, and employment. The importance and growth of the horticulture sector in India, has been in the same direction in the past couple of year. With the assumption of this importance and growth in production, the requirement data on horticulture as well as on other related factors became the need of the day. Recognizing the importance of timely and reliable information on different aspects of horticulture, the Government has taken various initiatives to improve the database of horticulture crops. The 'Horticultural Statistics at a Glance' has been the result of such an effort of the Ministry.

The Sixth issue of the 'Horticultural Statistics at a Glance-2022' being brought out contains rich collection of various information pertaining to horticulture crops including area, production, productivity, value of output, export, import, market arrival, prices etc. It also gives physical and financial achievement under the Mission for Integrated Development of Horticulture (MIDH), commodity profiles of important horticulture crops, infrastructure availability, rain fall distribution, irrigated area etc. For this publication, data on area and production of Horticulture crops has been taken from State/UTs through the HAPIS portal and other Central source agencies systems,

I take this opportunity to thank the Shri Arun Kumar, Senior Economic and Statistical Adviser, for his valuable support and guidance, and compliment Smt. Suchitra Yadav, Director, Shri Pankaj Kumar, former Deputy Director, Shri Hemanga Bhargav, Assistant Director, Smt. Somya Srivastava, Junior Statistical Officer, Shri Mohammad Mustkeem, Consultant, and Shri Ranbir Singh, Data Entry Operator, for their unrelenting efforts to bring out this publication. I also complement the efforts of Shri Joseph C.F, former Adviser who guided the team in carrying out the main work of this publication.

Overview of Horticulture Sector

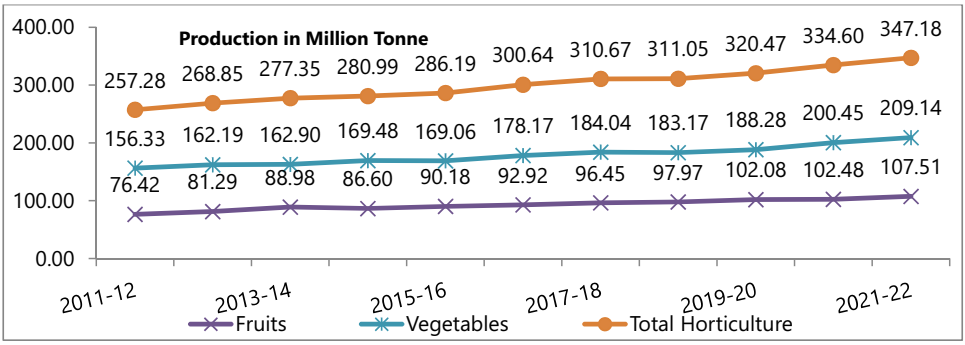
The need for diversification to horticulture sector was acknowledged by the Government of India in mid-eighties by focusing its attention on investment in this sector. Presently horticulture has established its credibility in improving income through increased productivity, generating employment and in enhancing exports. Resultantly, horticulture in the country has moved from rural confines to commercial ventures.

The Department of Agriculture & Farmers Welfare (DA&FW) of the Ministry of Agriculture & Farmers Welfare is the nodal department for over viewing horticulture development in the country. It implements different programmes through Departments of Horticulture/Agriculture in all the States and provides the leadership to coordinate activities for the promotion of horticulture. However, efficient implementation of programme and policies call for robust information in time. In this backdrop, this book presents the overall information on horticulture, focusing on area, production and yield estimates along with information about price, market arrivals and export.

The scenario of horticulture crops in India has become very encouraging. The percentage share of horticulture output in Agriculture has become 33%. Share of Plan outlay of Horticulture under agriculture & allied cultivation was 257.30 Million Tonne in the year 2011-12, has increased to 347.18 Million Tonne.

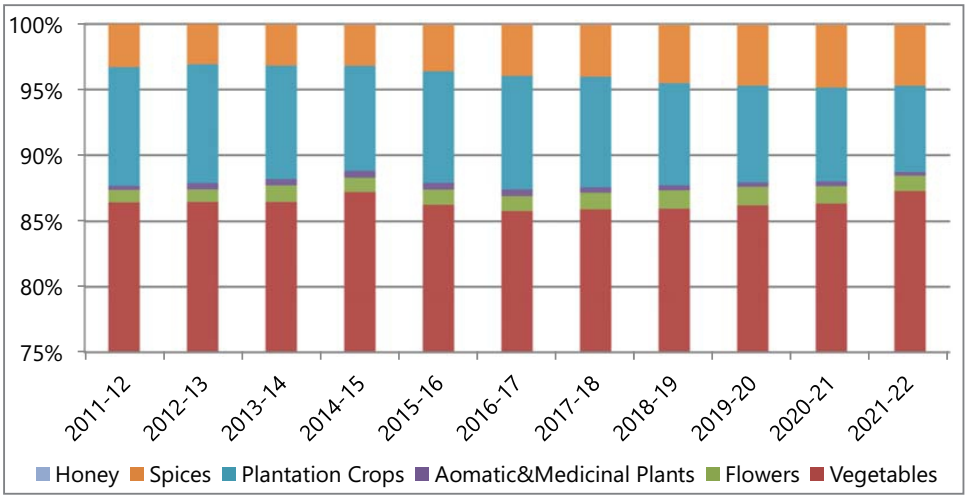
PRODUCTION: India has witnessed increase in horticulture production over the last few years. Significant progress has been made in area expansion of different horticulture crops resulting in higher production. Over the last decade, the area under horticulture grew by 2.5% per annum and annual production increased by 4.4%. During 2021-22, the production of horticulture crops was 347.18 Million Tonne from an area of 28.04 Million Hectare (Table 1.1). The production of vegetables has increased from 156.33 Million Tonne to 209.14 Million Tonne since 2011-12 to 2021-22 and production of fruits has increased from 76.42 Million Tonne to 107.51 Million Tonne since 2011-12 to 2021-22 as depicted in Table-1.1.

Figure-1.1: Annual Production of Fruits, Vegetables and Total Horticulture crops over the last 10 years from 2011-12 to 2021-22



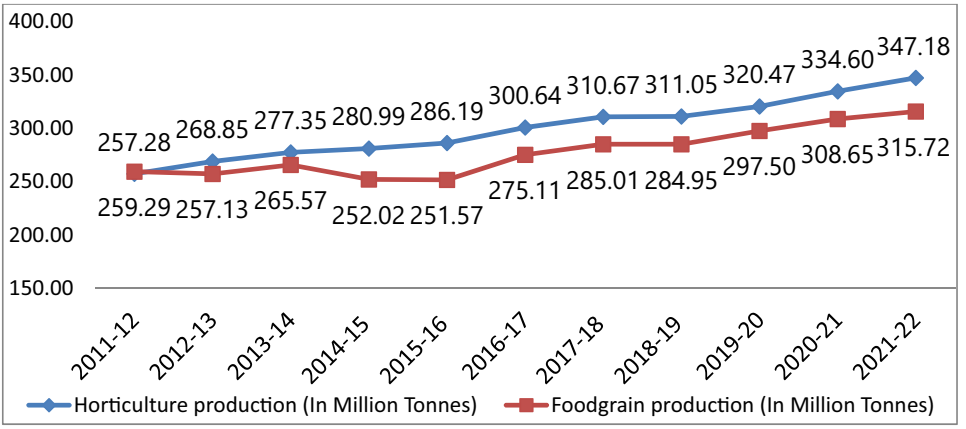
The percentage distribution of total horticulture crops in the country remains highest for vegetables (58 – 61%) followed by fruits (29 - 32%) and Plantation crops (4 – 6 %) over the last ten years as shown in Table-1.4.

Figure-1.2: Percentage distribution of total Horticulture production by major crop categories from the year 2011-12 to 2021-22



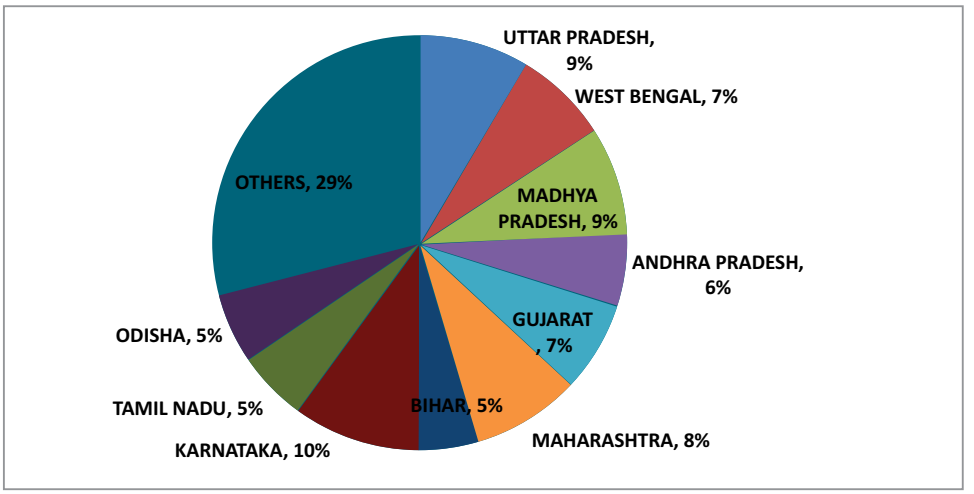
The production of Horticulture crops have outpaced the production of food grain since 2012-13 as may be seen at Figure–1.3. Compound Annual Growth Rate (CAGR) in Horticulture production in India during 2011-12 to 2021-22 is 3.04%. Area under Horticulture crops is increasing in India since 1990-91. Compound Annual Growth Rate (CAGR) in Horticulture area during 2011-12 & 2021-22 is 1.89%.

Figure– 1.3: Horticulture Production vis-à-vis Foodgrains Production from 2011-12 to 2021-22



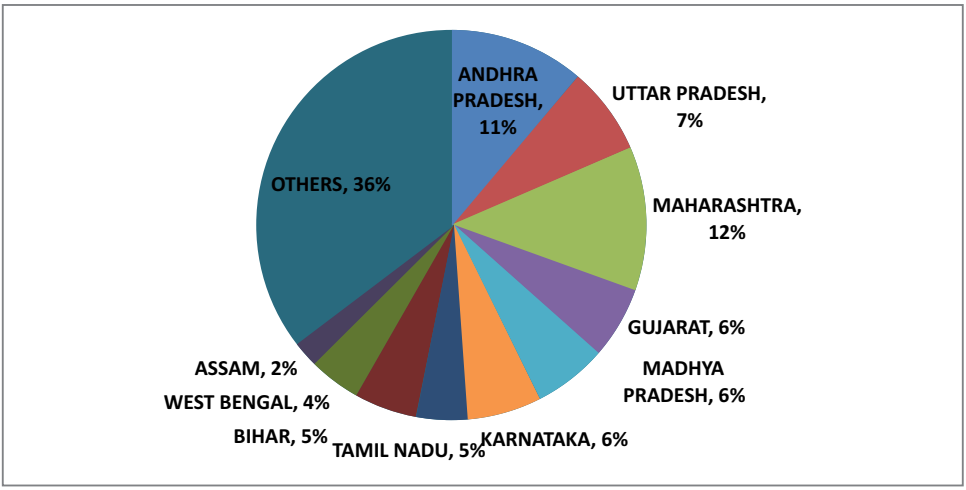
In 2021-22, the total horticulture production was highest in the state of Uttar Pradesh (440.95 Lakh Tonne) followed by Madhya Pradesh (353.14 Lakh Tonne) and West Bengal (332.07 Lakh Tonne) (Table 7.2.1)

Figure 1.4: Percentage share of total Horticulture production among major producing States for the year 2021-22



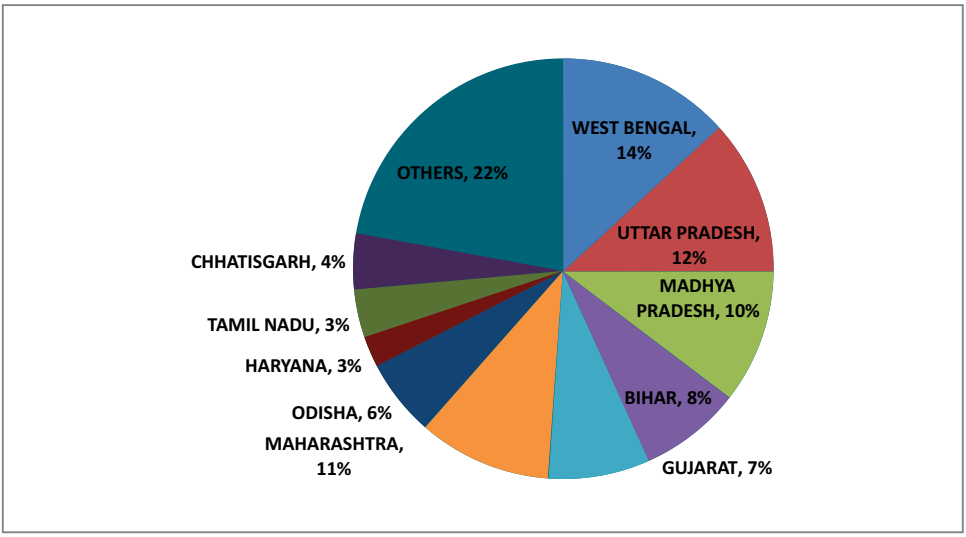
The total production of fruits in the year 2021-22 was highest in case of Andhra Pradesh (176.65 Lakh Tonne) followed by Maharashtra (125.17 Lakh Tonne) and Uttar Pradesh (111.14 Lakh Tonne) (Table 7.2.2).

Figure-1.5: Percentage Share of Fruit Production in major fruits producing States for the year 2021-22



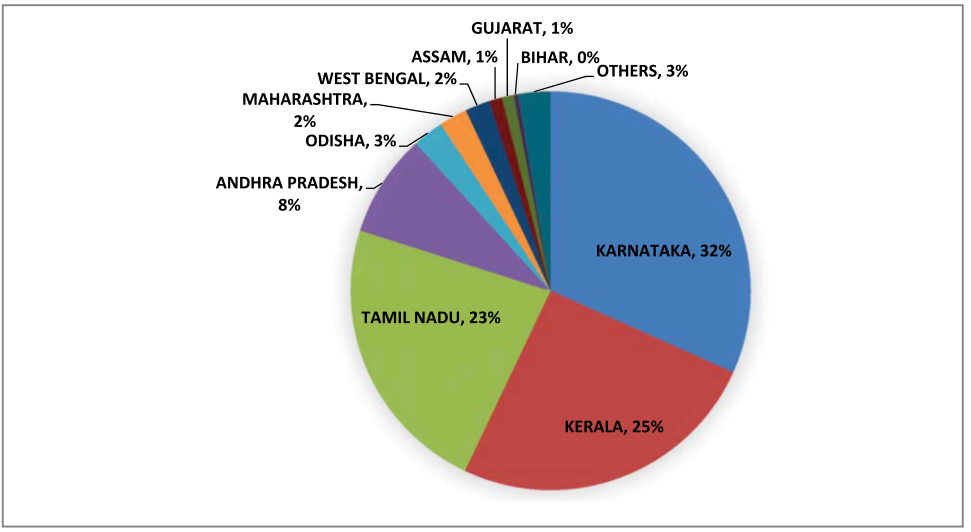
Apart from the nutritional benefits, the production of vegetables improves the economy of a country as these are very good source of income and employment. During 2021-22 the area under vegetable crop was 113.74 Lakh Hectare with a production of 2091.43 Lakh Tonne in India (Table 1.1). For this period the total vegetable production was highest in case of Uttar Pradesh (325.05 Lakh Tonne) followed by West Bengal (284.50 Lakh Tonne) (Table 7.2.3).

Figure-1.6: Percentage share of Vegetables production in major vegetables producing States for the year 2021-22



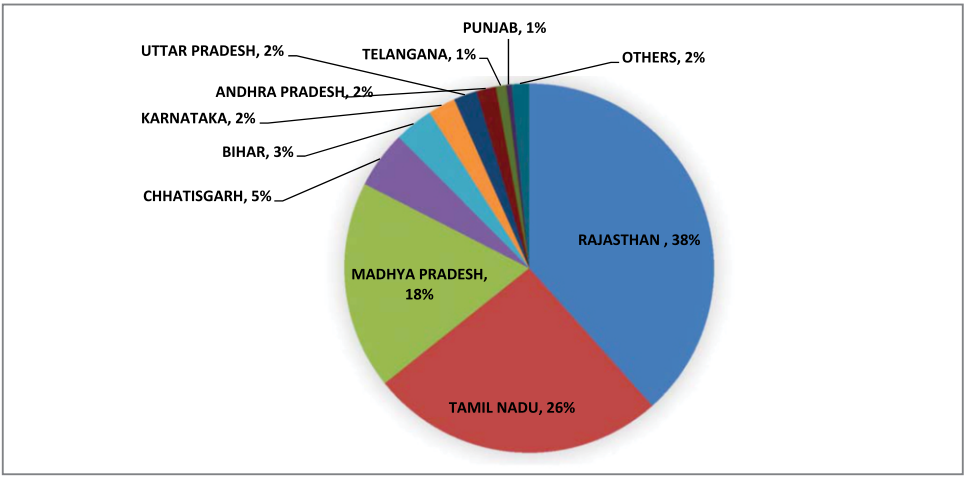
During 2021-22 the area under Plantation crop was 42.92 Lakh Hectare with a production of 157.64 Lakh Tonne in India (Table 1.1). For this period the total production was highest in case of Karnataka (49.98 Lakh Tonne) followed by Kerala (39.94 Lakh Tonne) (Table 7.2.4).

Figure-1.7: Percentage share of Plantation production in major plantation producing States for the year 2021-22



During 2021-22 the area under Aromatic and Medicinal crops was 6.68 Lakh Hectare with a production of 6.63 Lakh Tonne in India (Table 1.1). For this period the total production was highest in case of Rajasthan (2.55 LakhTonne) followed by Tamil Nadu (1.72 Lakh Tonne) (Table 7.2.5).

Figure-1.8: Percentage share of Aromatic and Medicinal production in major Aromatic and Medicinal producing States for the year 2021-22



Floriculture has good potential in the country, catering to both the domestic and international demand. Increasing trends in area and production of flowers has been observed since 2003-04. Floriculture is also important for bee-keeping industry which too provides an alternate source of income to the Indian farmers. The highest production of Flowers was recorded in Tamil Nadu (5.9 Lakh Tonne) followed by Karnataka (4.37 Lakh Tonne) and Madhya Pradesh (4.26 Lakh Tonne) (Table 7.2.6).

Figure-1.9: Percentage share of Flower production in major Flower producing States for the year 2021-22

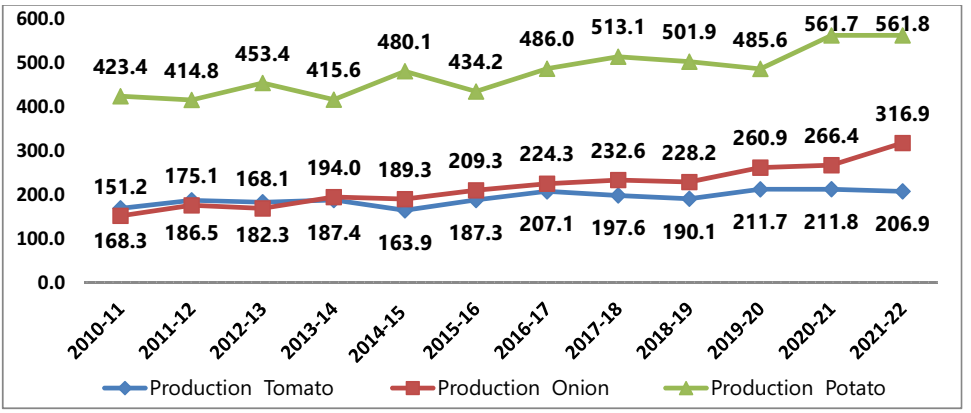

Figure 1.12: Productivity (MT/ Ha) of Tomato, Onion and Potato from 2011-12 to 2021-22

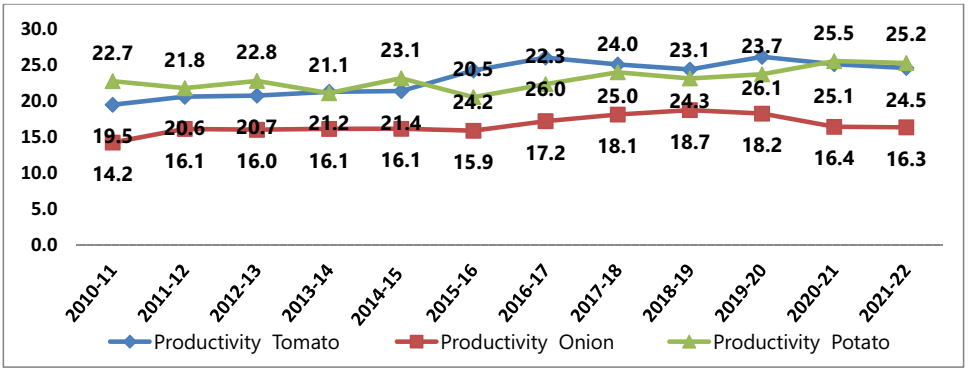

INFRASTRUCTURE AVAILABILITY: In India, because of imperfect coordination between supplies and demand, seasonality and perishable nature of horticulture crops, storage plays an important role in the marketing. A chain of cold storages are set up in different States of our country. The State of Uttar Pradesh (2429) was having highest number of cold storages in the year 2021 followed by Gujarat (985) and Punjab (726) (Table 11.5).

CONSUMPTION: The nutritional intake from fruits and vegetables is higher among urban population than that of rural population. Along with urbanisation, people are likely to increase their calorie intake at a higher pace through the consumption of fruits and vegetables, the increase in calorie intake is more than 10% in urban area whereas it is merely 1.89% in rural area over the period from 2004-05 to 2011-12. It is estimated that per capita fruits availability in our country is

206.8 gm per day which is far below the recommended quantity of 230 gm per capita per day (Table 12.1 – 12.2).

WORLD SCENARIO: It is a matter of satisfaction that India is the second largest producer of Vegetables and Fruits and the country has a significant presence in global market (Table 13.1). The different types of fruits are exported to the outside World. Grapes occupy the premier position in exports with 263.13 thousand Tonne valued at Rs. 230231 lakh (Table 10.1.4). Other fruits which have attained significant position in exports are Banana and Mango.

The development achieved in the horticulture sector is indicative of the fact that there is growing demand for horticulture produce. The past experiences have been rewarding for enhanced output from the investment. Availability of timely robust information in this sector will certainly improve the socio-economic conditions of Indian farmers by providing self-reliance besides environmental protection.

Notes:

1: Prior to 1993-94 data of flowers was not collected

2: The production figures of flowers till 2011-12 included only loose flowers as the production of cut flowers were collected in numbers. From 2012-13 onwards, the figures for cut flowers (converted into Metric Tonne from numbers) were also included in the production figures of flowers

3: Till 2003-04,Separate estimates for aromatic and medicinal plants were not released

4: Production figures of Honey was not available for the year 1991-92, 1992-93, 1994-95, 2011-12 and 2012-13

5: Prior to 2015-16, watermelon and muskmelon were included under vegetables. From 2015-16 onwards there are classified as fruits

Methodology for Estimation of Horticulture Crops

Fruits and vegetables account for nearly 90% of total horticulture production in the country. India is now the second largest producer of fruits and vegetables in the world and is the leader in several horticultural crops, namely Mango, Banana, Papaya, Cashewnut, Arecanut, and Okra. However the nature of horticulture crops being such that it is not easy to make assessment of their production. These crops, especially vegetables are grown in small plots, fields or in the back of the houses, do not have single harvesting in most of the cases which makes their assessment difficult. Many horticulture crops have multiple pickings in a single season. Similarly many fruit trees are scattered, which are not counted for assessment.

In view of above difficulties several research studies were taken up by agricultural scientists in the past. Thencentral sector Plan Scheme called Crop Estimation Survey of Fruits & Vegetables (CES-F&V)-a component of Improvement of Agricultural Statistics Scheme, was implemented by the DES. The scheme envisaged the generation of area and production estimates using sampling and estimation methodology evolved by ICAR - Indian Agricultural Statistics Research Institute (IASRI), Pusa, New Delhi. The scheme was implemented in 11 States (Andhra Pradesh, Gujarat, Haryana, Himachal Pradesh, Karnataka, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu and U.P) covering selected crops- 7 fruit crops (Apple, Mango, Citrus, Pineapple, Grapes, Banana and Guava) and 7 vegetable crops (Potato, Cabbage, Cauliflower, Onion, Tomato, Ginger and Turmeric). The scheme was initiated in 1982-83 and was implemented by central funding through DAC & FW. However the scheme was fraught with some problems which was noted by National Statistical Commission (NSC) which recommended that

- The methodology adopted in the pilot scheme of "Crop Estimation Survey on Fruits and Vegetables" should be reviewed and an alternative methodology for estimating the production of horticultural crops should be developed taking into account information flowing from all sources including market arrivals, exports and growers associations.
- Special studies required to establish the feasibility of such a methodology should be taken up by a team comprising representatives from ICAR - Indian

Agricultural Statistics Research Institute (IASRI), Directorate of Economics and Statistics, Ministry of Agriculture (DESMoA), Field Operations Division of National Sample Survey Organization (NSSO (FOD)) and from one or two major States growing horticultural crops.

- The alternative methodology should be tried out on a pilot basis before actually implementing it on a large scale.

Accordingly the earlier scheme viz. CES F&V has been discontinued from the year 2013-14. A new alternative methodology Coordinated Programme on Horticulture Assessment and Management using geoinformatics (CHAMAN) developed by IASRI was tried out on pilot basis in 6 states under the project CHAMAN of Department of Agriculture, Cooperation & Farmers' Welfare. Results through by the pilot studies could not meet the objective. IASRI has been asked to look into the matter and revise the methodology accordingly.

Coordinated Programme on Horticulture Assessment and Management using geoinformatics (CHAMAN)

The Department of Agriculture, Cooperation & farmers' Welfare, Ministry of Agriculture & Farmers welfare under the Mission for Integrated Development of Horticulture (MIDH) had launched a project called CHAMAN. The programme has the objective to develop and firm up scientific methodology for estimation of area and production under horticulture crops. It has two main components namely: (1) Remote sensing (RS) Technology and (2) Sample Survey (SS) methodology for estimation of area and production of horticultural crops.

The Remote Sensing programme is being implemented by Mahalanobis National Crop Forecast Centre (MNCFC) and has the following components.

i. **Area and Production assessment of seven major horticultural crops in major states.**

ii. Remote sensing for **developmental studies** like Site suitability and post-harvest infrastructure development

iii. **Detailed scientific field level research studies** for developing technology for crop identification, yield modeling and disease assessment for other horticulture crops.

Area Assessment

Area assessment has been carried out for selected crops in the selected districts of major states. The crops were selected based on the production share, as mentioned in the section 1. Accordingly, following crops and study area were proposed. Satellite data used were either of LISS III (23.5 m resolution) or LISS IV, depending upon the spatial extent of the crop. In absence of availability of Indian satellite data during the crop growth, foreign satellite data was also explored.

Crop Type	Crop	State (Districts)
Fruit	Banana	Tamil Nadu, Andhra Pradesh, Maharashtra, Gujarat, Karnataka
	Mango	UP, Gujarat, Karnataka, Andhra, Bihar
	Citrus	Andhra Pradesh, Maharashtra, Punjab, MP, Gujarat
Vegetables	Potato	UP, Bihar, WB, Gujarat, Punjab
	Onion	Maharashtra, Gujarat, MP, Karnataka, Bihar
	Tomato	Andhra Pradesh , Odisha, Karnataka, MP, WB, Bihar
Spices	Chilli	Andhra Pradesh, Karnataka, WB, MP, Odisha

Production Assessment

For production forecasting, yield modeling has been carried out. India Meteorological Department, under FASAL project, develops district-level, empirical agro-meteorological yield models for different crops. Similar procedures were followed for yield forecasting of vegetable crops.

Horticultural Development Studies

The Horticultural development studies were grouped into following categories.

i) Site Suitability
ii) Post-Harvest Infrastructure
iii) Crop Intensification
iv) GIS database creation
v) Orchard Rejuvenation
vi) Aqua-horticulture

These studies were used for:

i) Site-suitability: for introduction/expansion of important horticulture crops, e.g. scope of replicating the village level horticulture plans developed for North-Eastern states in various states.

ii) Post-harvest Infrastructure: GIS and remote sensing were used to assess the need and find the optimum locations for infrastructures such as cold chains, markets, etc.

iii) Crop Intensification: In areas where cropping intensity was low and regions of unutilized/under-utilized, short duration horticultural crops could be incorporated into the crop rotation. This also linked with watershed and wasteland development programmes of the Government of India.

iv) GIS database creation: The GIS database included the inputs required managing the horticultural crops such as soils, weather, infrastructure (e.g. markets). This helped in better income generation for the farmers, especially in tribal and remote areas.

v) Orchard Rejuvenation: This aids in identifying the plantations/ orchards that needed rejuvenation and assess the shifting of orchard areas especially of Apples in Himachal Pradesh, Mango (Malda), Orange- (Darjeeling) and Citrus in Arunachal Pradesh.

vi) Aqua-horticulture: Wetland in Andhra Pradesh has been created at 1:50000 scale using satellite data. Various horticultural crops (e.g. Makhana/Fox nut) are grown in wetlands. A GIS database was created for selected sites to understand the ecology and economics of these crops so that these could be replicated.

Note1.* Provisional, 2. #: In 2002 -03 there was significant decline to gross area sown and net area sown due to decline in net area sown in the states of Andhra Pradesh, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odhisa, Rajasthan, Tamil Nadu, West Bengal ,Haryana. This was mainly due to deficient rainfall. and 3. @ In 2009 -10 there was significant decline to gross area sown and net area sown due to decline in net area sown in the states of Andhra Pradesh, Bihar,

Pollinizing	Tydeman's Early, Red Gold, Golden Delicious, Mc Intosh, Lord Lambourne, Winter Banana, Granny Smith, Starkspur Golden, Golden Spur

- **Advance Technology** : High density planting on Mailing root stock
- **Pre-cooling** : Forced air
- **Storage conditions-**
  Temperature : -1.1˚ to 0˚C
  Relative Humidity : 85-90%
  Storage Period : 4-8 Months
- **Peak Harvesting Season:**
  1) Jammu & Kashmir : September, October
  2) Himachal Pradesh : August, September
  3) Uttrakhand :July, August
  4) Arunachal Pradesh : October
- **Export from India (2021-22):**
  Quantity : 31.98 Thousand Tonne
  Value : 11558.11 Lakh Rupees
- **Import to India (2021-22):**
  Quantity : 459.25 Thousand Tonne
  Value : 286620.41 Lakh Rupees

14.4 BANANA

- **Origin** : South East Asia
- **Major Producing States/Districts in India :**
  1) Tamil Nadu (Theni, Tiruchirappalli, Coimbatore, Tuticorin, Pudukkottai etc.)
